A brief overview of projects I drove from start to finish and artifacts I built.

Hi! Thanks for checking my portfolio out. If you're short on time I'd recommend digging into examples **one** and **three** as good examples of my tool-building capabilities and business rigor I bring into my projects.

12 → 3

The number of weeks I reduced our core consulting engagements to after rebuilding our practice around AI.
See project example 1 →

480 → 30

The number of minutes the asset-to-storefront workflow was reduced to after I built the CC Libraries to Adobe Commerce merchandising integration.
See project example 3 →

24

The number of executive teams I aligned under a shared generative AI vision, the groundwork for Adobe Firefly.
See project example 4 →

WHAT'S INSIDE

01 **Interactive care process map for retired NFL players** 3
A national health system asked me to work out how a concierge care program for retired NFL players should run. I interviewed all project leads across 18 departments and turned a highly sophisticated outcome into an easy-to-navigate interactive process map.

02 **The Design Debt Initiative** 7
An ecosystem map and one-year plan that turned perpetually backlogged UX fixes into a funded annual event at Adobe.

03 **Creative Cloud + Adobe Commerce Integration Build** 9
The business case, the opportunity landscape, and the integration I ended up leading as PM that dramatically reduced workflow ToT.

04 **Generative AI Initiative Project Lead** 12
How I got 24 teams at Adobe to agree on what generative AI should be, back before there was a plan.

05 **Articulating the bridge between design efforts and business value** 15
A metrics map that ties what designers can change to the numbers the business tracks, so a design team can show the value it adds.

06 **Adobe Express beta research program** 17
The framework I built for grading whether a beta workflow is ready to ship, with the deck and roadmap I used to successfully gain buy-in from leadership.

07 **Other decks and boards** 20
Shorter cuts of three more projects: a root-cause deep dive on billing support tickets, an audience framework for Experience Cloud, and a competitive analysis workshop I ran to help the Adobe Analytics design team know how to compete with rising SMB analytics platforms.

08 **About me** 24
How I work, the skills list, and how to reach me.

01 —— PROJECT EXAMPLE 1 · CAST & HUE · 2026

Interactive care process map for retired NFL players

A national U.S. health system wanted to launch a concierge care program for retired NFL players: multi-day visits that pull in sports medicine, cardiology, imaging, neurology, primary care, scheduling, billing, and an outside agency that manages the players' care. The whole journey had never been written down in one place, so I wrote it down, and then built it as something the team can click through.

CLIENT

A national U.S. health system (name withheld) and its athlete-care partner agency

MY ROLE

Led the research and synthesis; designed and built the map

WHEN

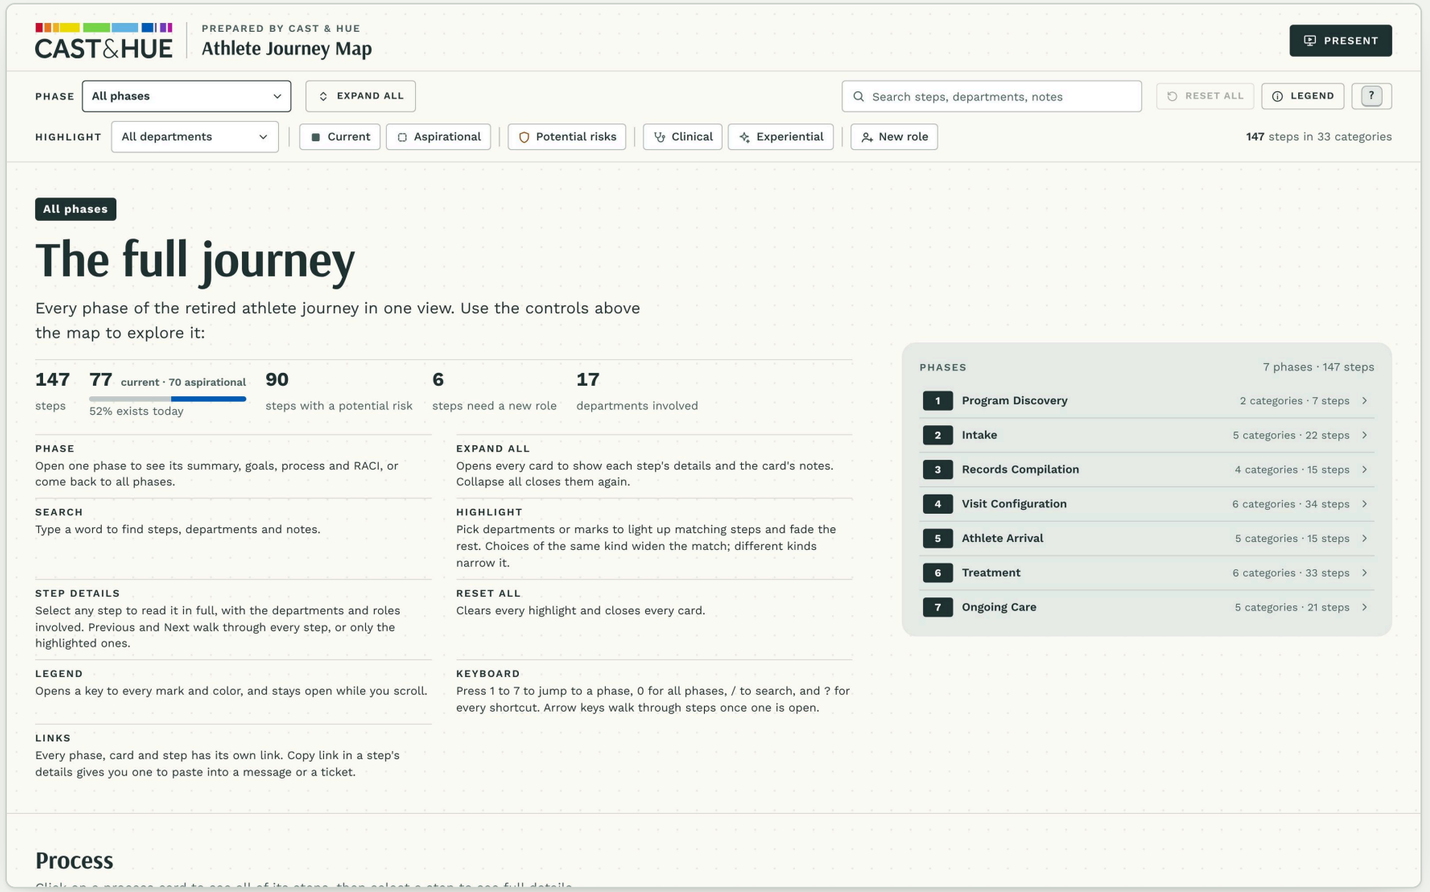

Fall 2026 · v1 delivered October 21

METHODS

Stakeholder interviews, qualitative coding, process mapping, RACI, and risk and capability analysis

OUTPUT

Interactive HTML map with search, filters, a step detail panel, keyboard shortcuts, deep links, and a presentation mode

01 The full journey on open: filters for capability, risk, and department, the journey at a glance, and the phase index.

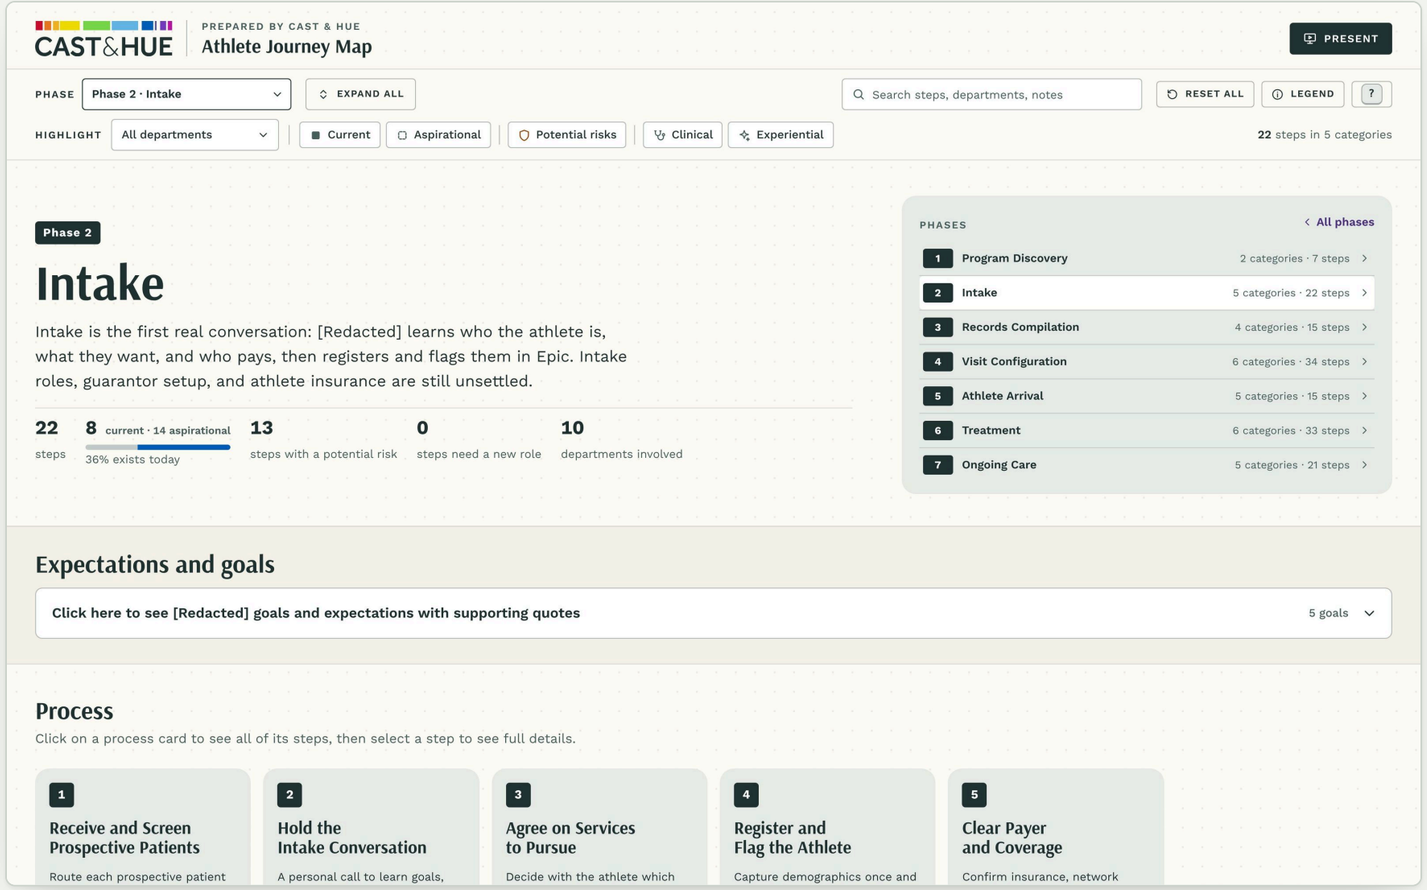

01 INTERACTIVE CARE PROCESS MAP FOR RETIRED NFL PLAYERS

The problem

Sports medicine knew the exam and scheduling had the calendar, the agency knew the players, and nobody had written down the handoffs between them. Leadership needed that worked out before they could staff the program or price it.

What I did

I interviewed the project leads across 18 departments, coded every interview, and built the journey step by step from what people told me. Every step records who's involved, whether it exists yet, what could go wrong, and how many interviews raised it.

02 One phase (Intake). The summary, how much of it exists today, the client's goals with supporting quotes, and the process cards.

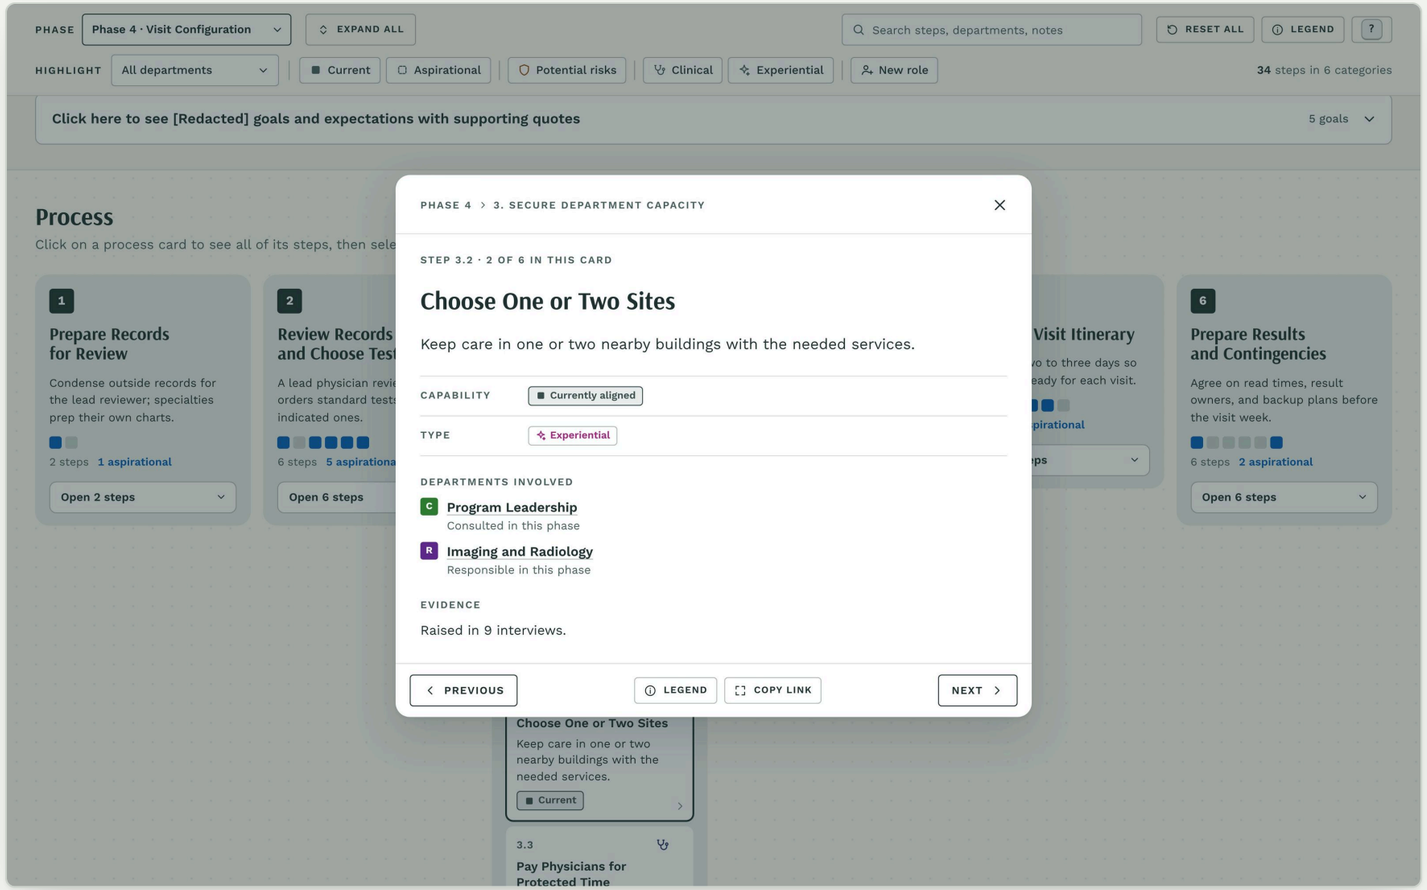

What came out

Version 1 went to the client in October 2026 as the working draft for program design. The map is live below, so click around.

7 phases, from program discovery to ongoing care	**147** steps in 33 process categories	**18** departments in a per-phase RACI
90 steps with a flagged risk and the interview context for it	**70** aspirational steps, marked apart from the 77 that exist today	**6** steps that need a new role

WHAT THE TOOL DOES

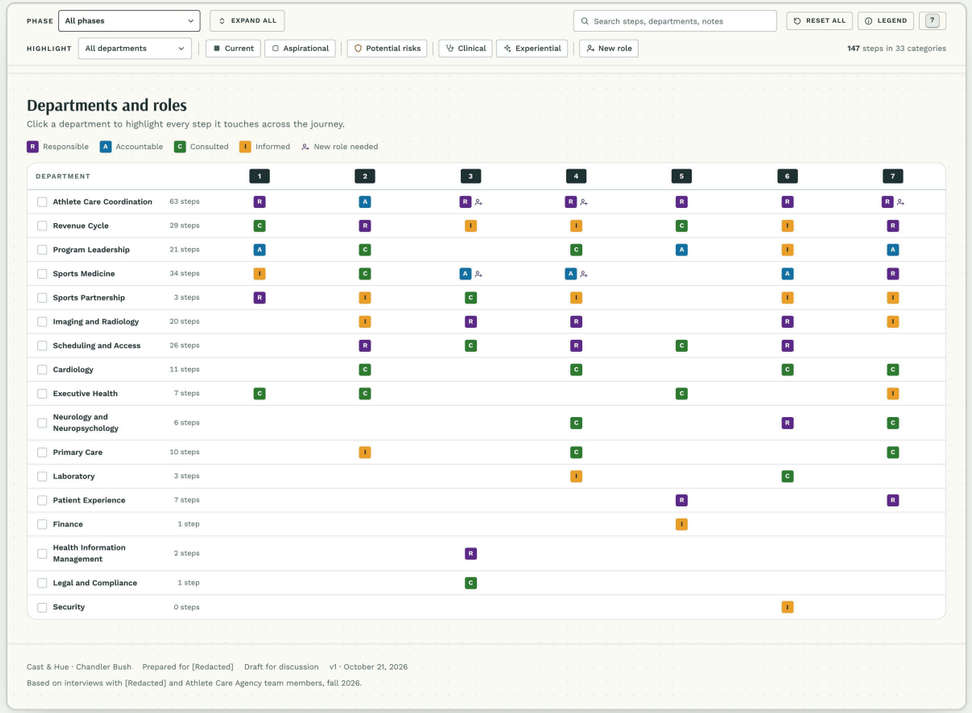

- Phase view with a summary, the client's goals with supporting quotes, process cards, a RACI, and a stats strip for the phase
- Step panel: capability, type, risk, departments, role status, and an evidence count
- Click a department anywhere, including inside a step, to light up every step it touches across the journey
- Search over steps and notes; 17 best practices borrowed from the partner agency, tagged to the steps they improve
- Keyboard shortcuts (1 to 7 for phases, arrows to walk steps, ? for the list), previous and next phase links, and a copyable link to every phase, card, and step
- Presentation mode that strips the controls and walks a phase card by card; swipe works on a tablet

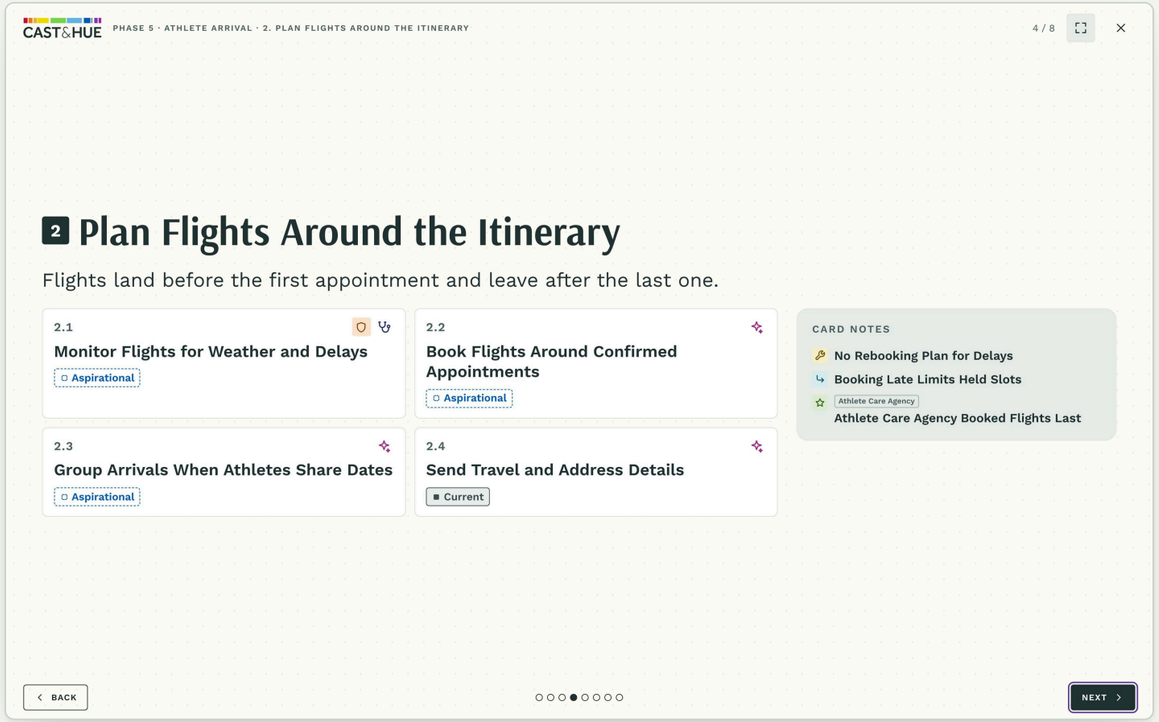

03 One step opened up. Capability, type, the risk people described in interviews, the departments involved, whether the role exists, and the number of interviews it came up in.

Departments, roles, and the meeting view

Click a department to light up every step it touches; six steps need a role that does not exist yet. Presentation mode walks a phase card by card.

04 Departments and roles. 18 departments across 7 phases; click one and every step it touches lights up.

05 Presentation mode. This is the view the program team uses when they walk a phase together in a meeting.

The Design Debt Initiative

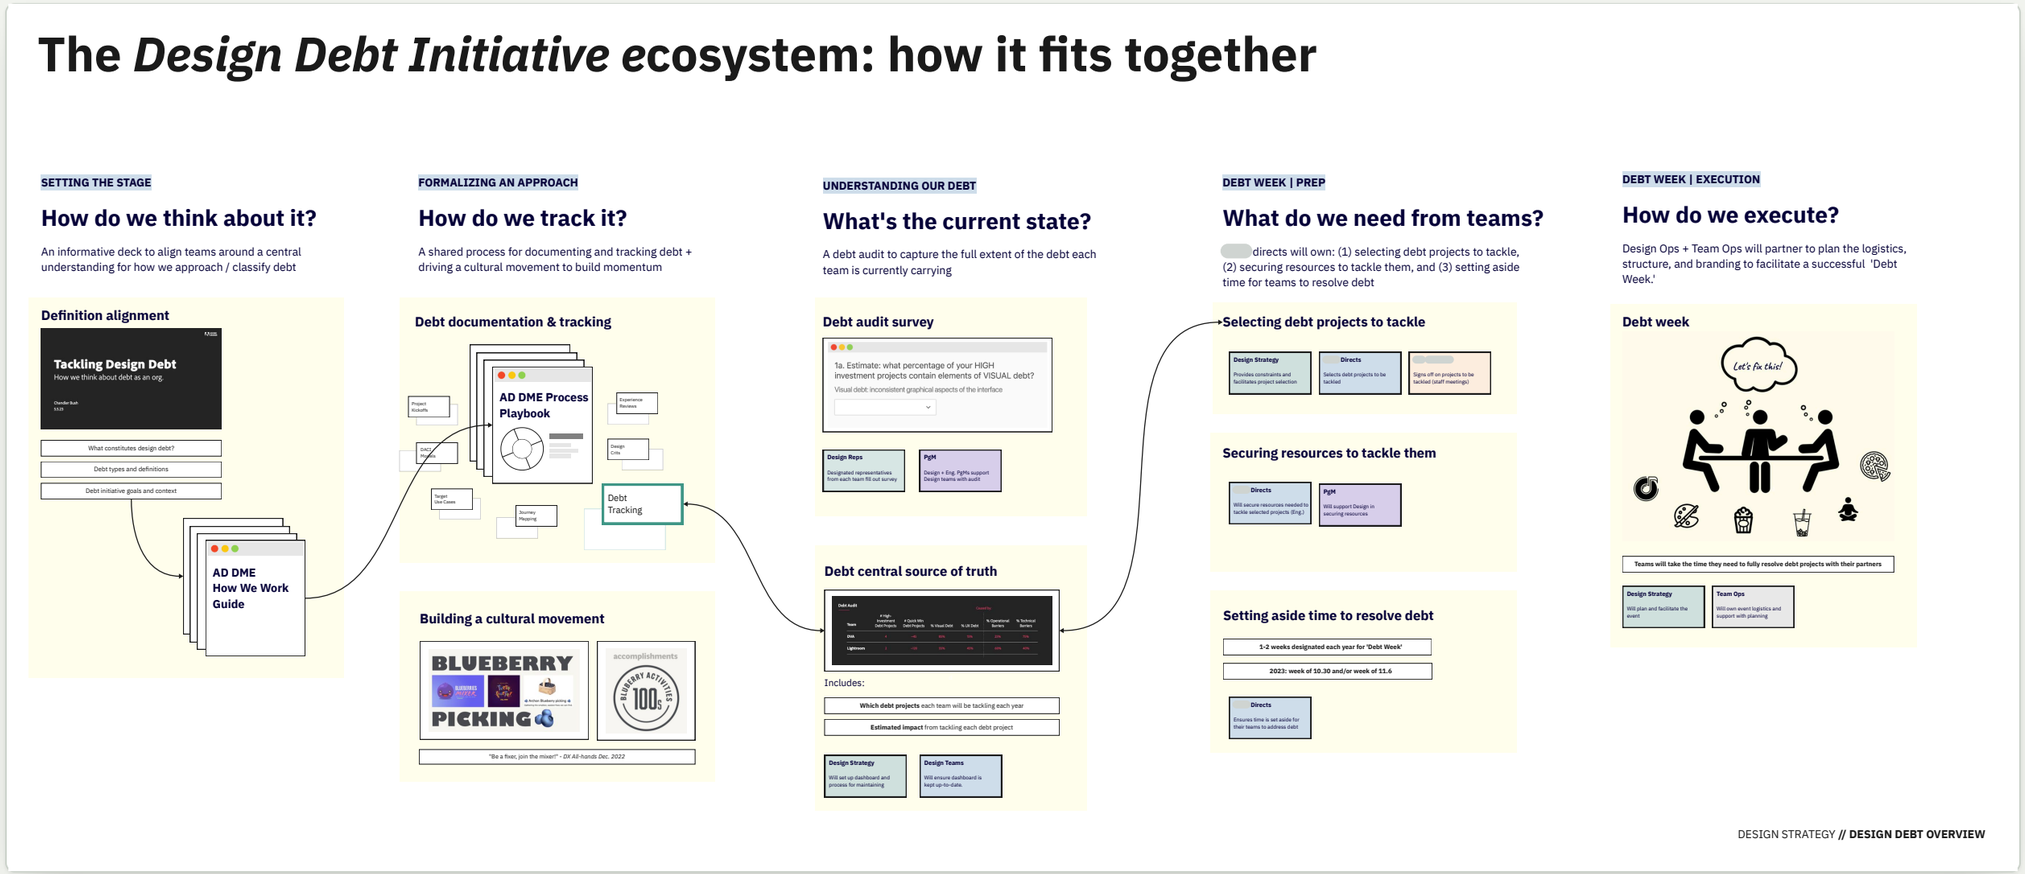

An ecosystem map and a one-year plan for turning a parking lot of perpetually backlogged UX fixes into a funded, annual Debt Week across Adobe's Digital Media design teams.

MY ROLE
Design strategist; designed the initiative and its operating model

WHEN
2023

METHODS
Stakeholder interviews, debt audit survey, process design, DACI

OUTPUT
Ecosystem one-pager, 2023 approach, and a playbook and tracking model

06 How it fits together: five stages, from definition alignment to Debt Week execution, with the owners and artifacts at each stage.

02 —— THE DESIGN DEBT INITIATIVE

The problem

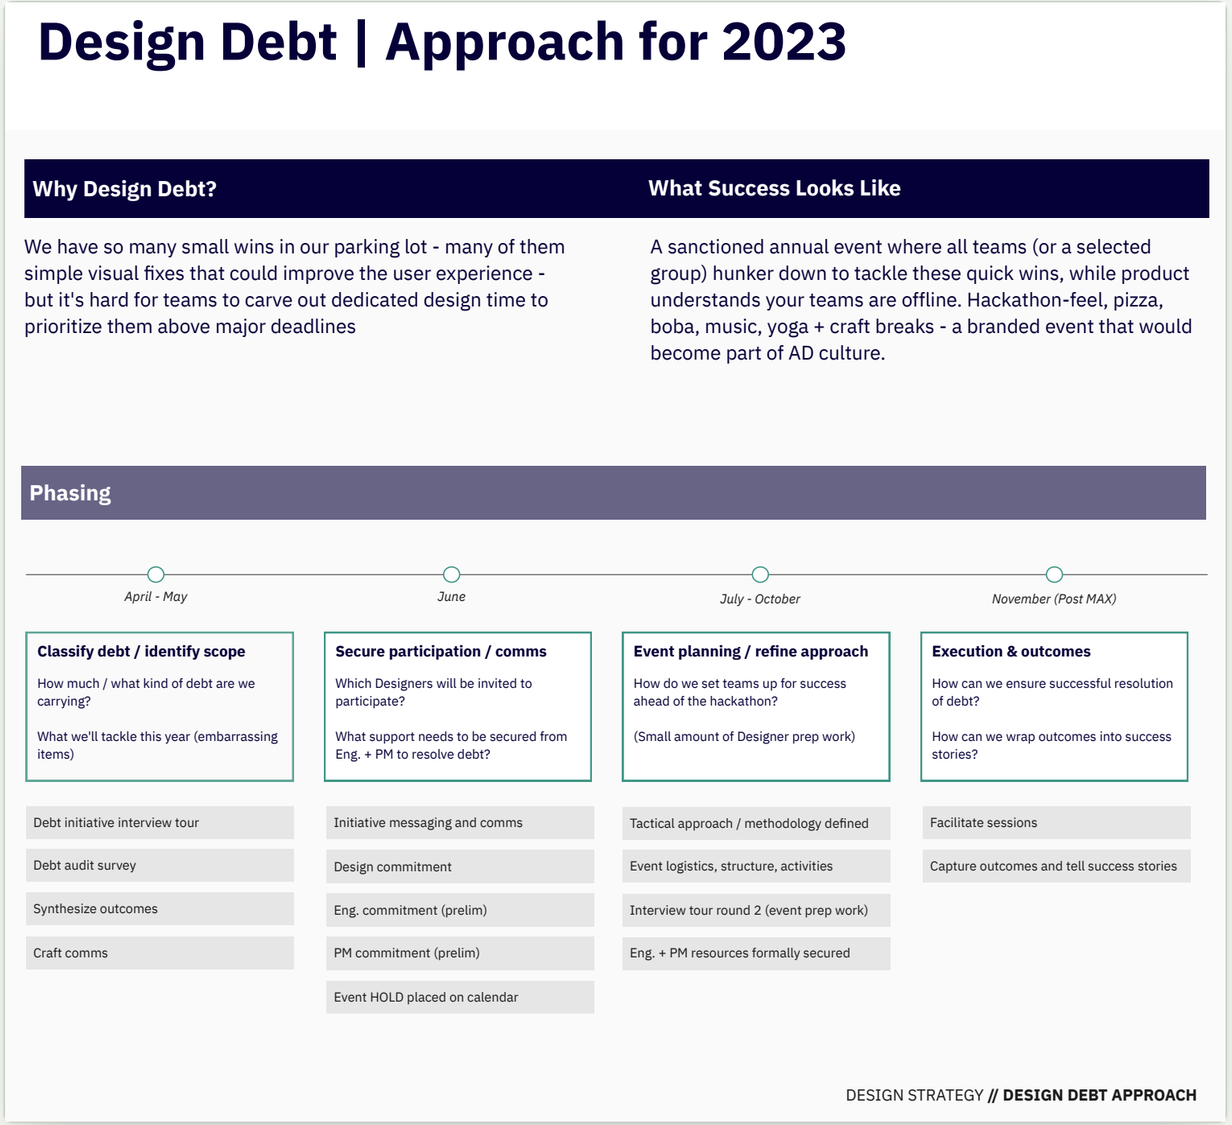

Every design team had a list of small fixes that everyone agreed were worth doing and nobody had time for. There was no shared definition of design debt either, so nobody could see how much each team was carrying.

What I did

Debt Week was the easy part. Most of the work went into the ecosystem around it: a shared definition of debt, tracking that lives in the playbook teams already used, an audit feeding one central list, and leadership owning selection and resourcing.

Why I like this one

Each piece has an owner and debt gets measured. It's set up to run again next year.

07 The 2023 approach. Why design debt, what a good year would look like, and four phases and the question each has to settle.

03 PROJECT EXAMPLE 3 · ADOBE CREATIVE CLOUD + ADOBE COMMERCE · 2020 TO 2022

Creative Cloud + Adobe Commerce Integration Build

Adobe owned the tools merchants use to make product images and the platform they sell on, and the two didn't talk to each other. I ran the work sessions that mapped the opportunity and wrote the business case, and when the first build kept slipping I stepped into the lead PM role and shipped it. The asset-to-storefront workflow went from about eight hours to thirty minutes.

ORGANIZATION

Adobe, Creative Cloud and Adobe Commerce (Magento)

MY ROLE

Design strategist on the opportunity work; lead PM on the CC Libraries integration

WHEN

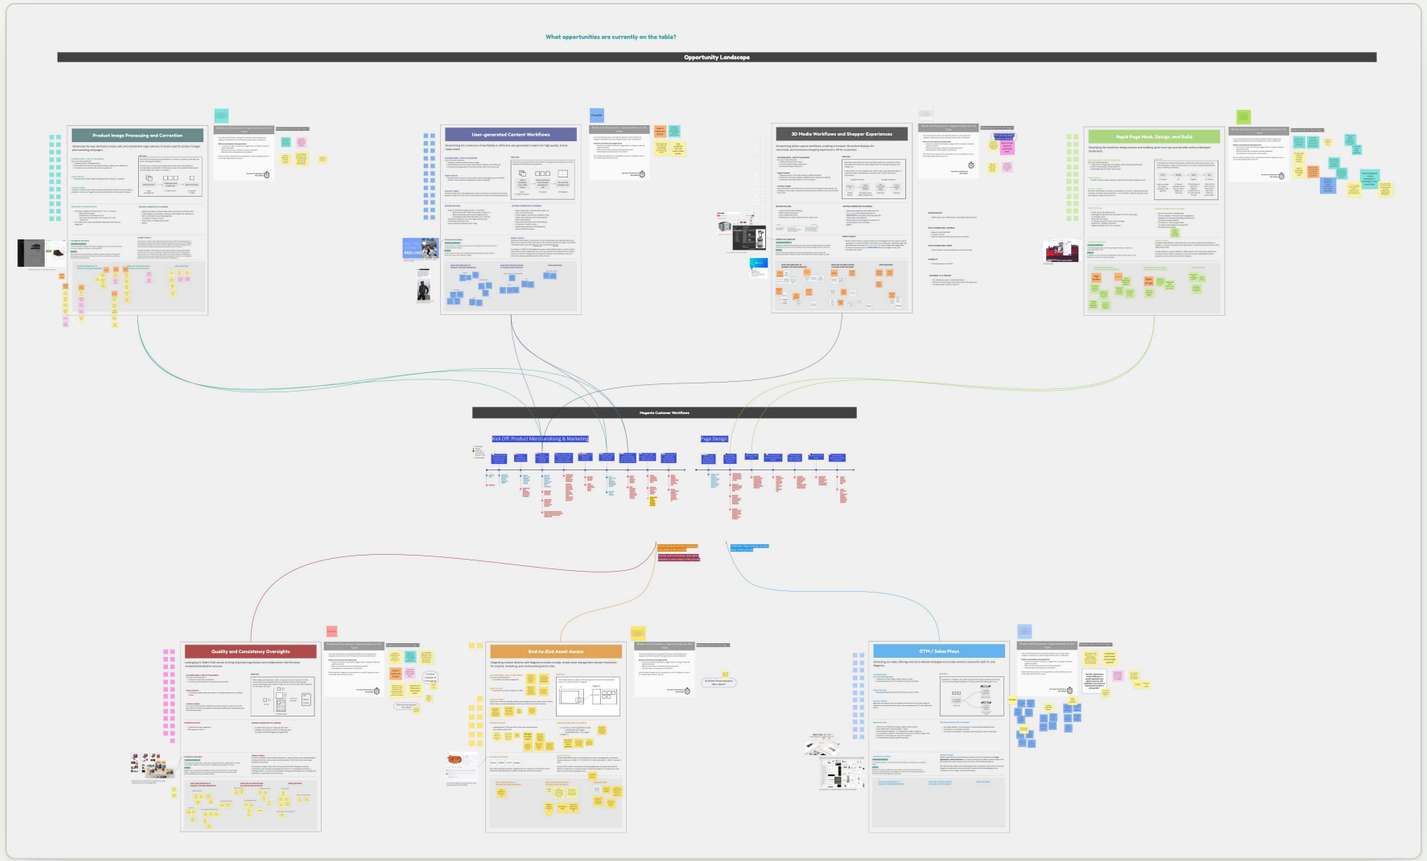

2020 to 2022

METHODS

Customer research, opportunity mapping, desirability-feasibility-viability scoring, phased roadmap, business case

OUTPUT

Business case deck, opportunity landscape board, phased integration plan, shipped integration

08 The opportunity landscape: seven workstream frames connected to the merchant workflows they improve. This is the board the business case came out of.

The problem

Merchants with big, fast-changing catalogs were paying for photo shoots and slow editing to keep product images consistent, then re-uploading all of it into Commerce by hand. Two-thirds of them already had Creative Cloud, and the two products had never been hooked together.

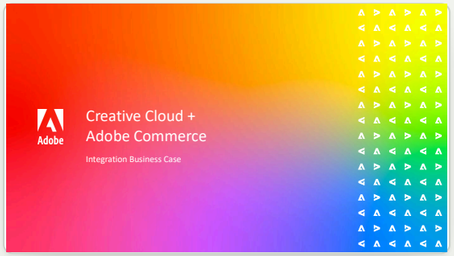

What I did

I ran work sessions with product, research, design, and engineering from both sides, mapped every opportunity on one board, and scored each one on desirability, feasibility, and viability. The business case made CC Libraries and Aspen (Photoshop's imaging services) the first integrations to build.

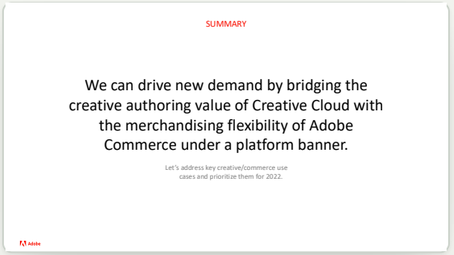

What came out

Leadership approved the phased plan, and when the first build kept slipping I took the lead PM role and shipped it. Publishing an approved asset to a storefront went from roughly eight hours to about thirty minutes.

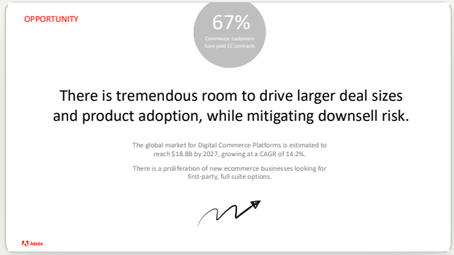

FROM THE BUSINESS CASE DECK

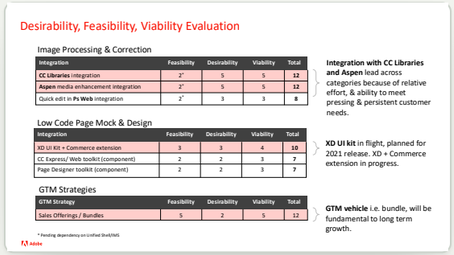

09 The business case

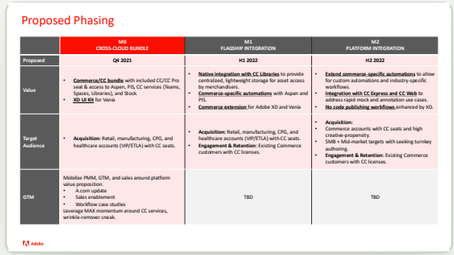

10 Summary: bridge creative authoring and merchandising

11 The opportunity: 67% of Commerce customers already pay for CC

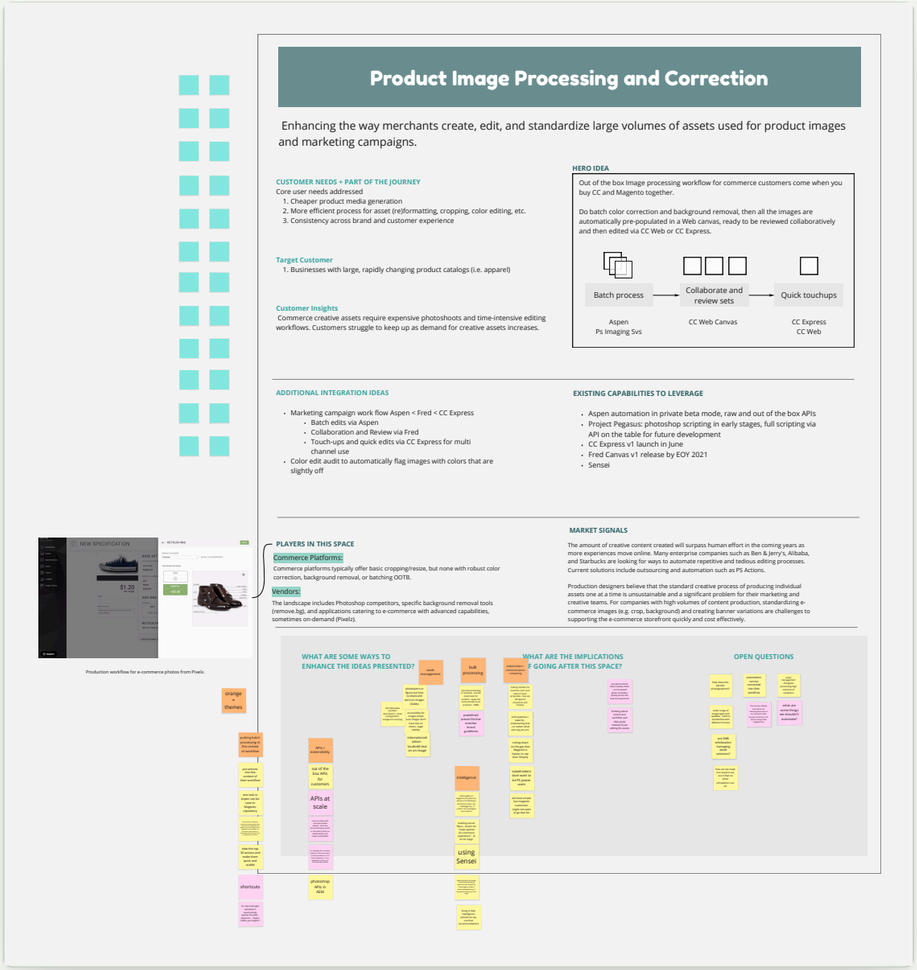

12 Scoring each integration on desirability, feasibility, and viability

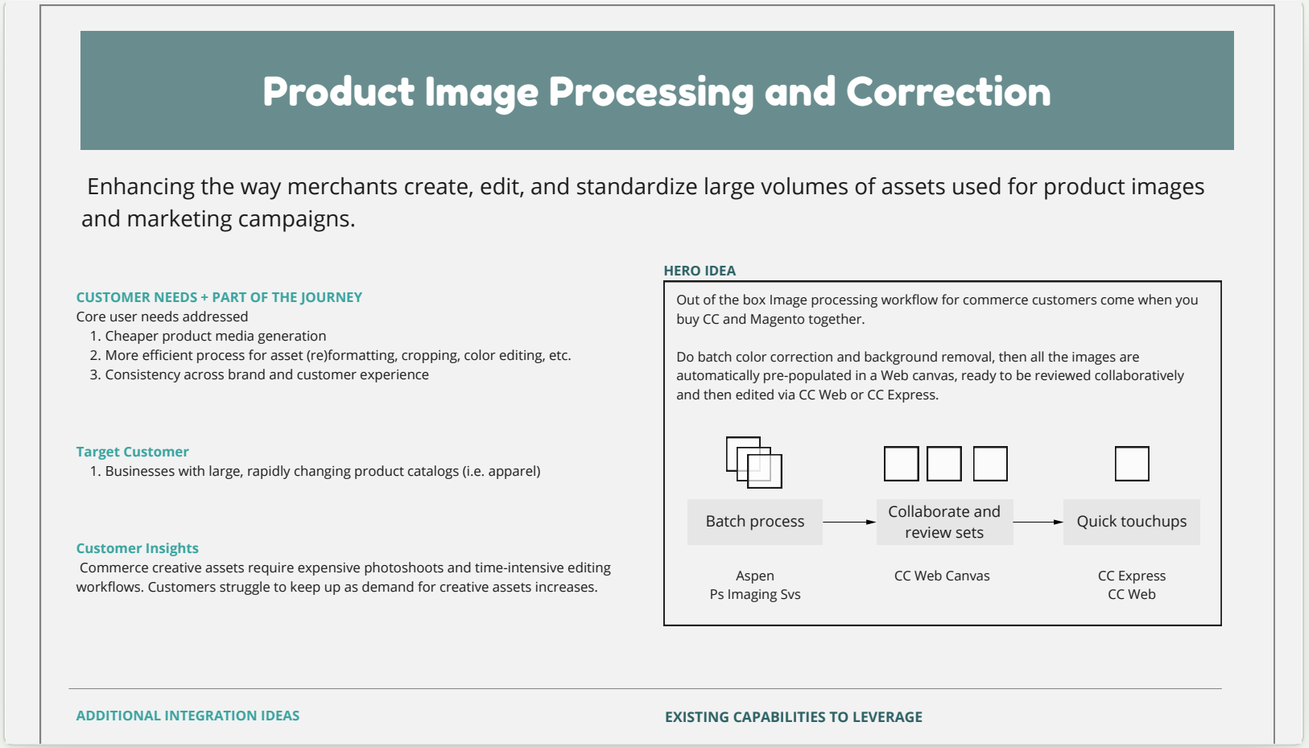

13 The phased plan leadership approved

Zoom in: Product Image Processing and Correction

Zoom in on one frame: Product Image Processing and Correction. The customer need, the hero idea, the capabilities to reuse, the players, market signals, and the sticky-note round where the team pushed on it.

14 The frame, from the opportunity landscape

15 The hero idea as a three-step workflow: batch processing in Photoshop's imaging services, review on a shared web canvas, quick touch-ups in Express.

04 —— PROJECT EXAMPLE 4 · ADOBE · 2022

Generative AI Initiative Project Lead

When this started, Adobe didn't have a generative AI strategy. It had 24 working teams and a lot of opinions. I interviewed the people holding them, opened the first leadership summit on the topic with what they'd told us, and kept a map of every workstream current. This is the alignment work that came before Firefly.

ORGANIZATION

Adobe, Digital Media design and the AI/ML org

MY ROLE

Design strategist; led the stakeholder research and the workstream ecosystem; worked daily with the SVP of AI/ML

WHEN

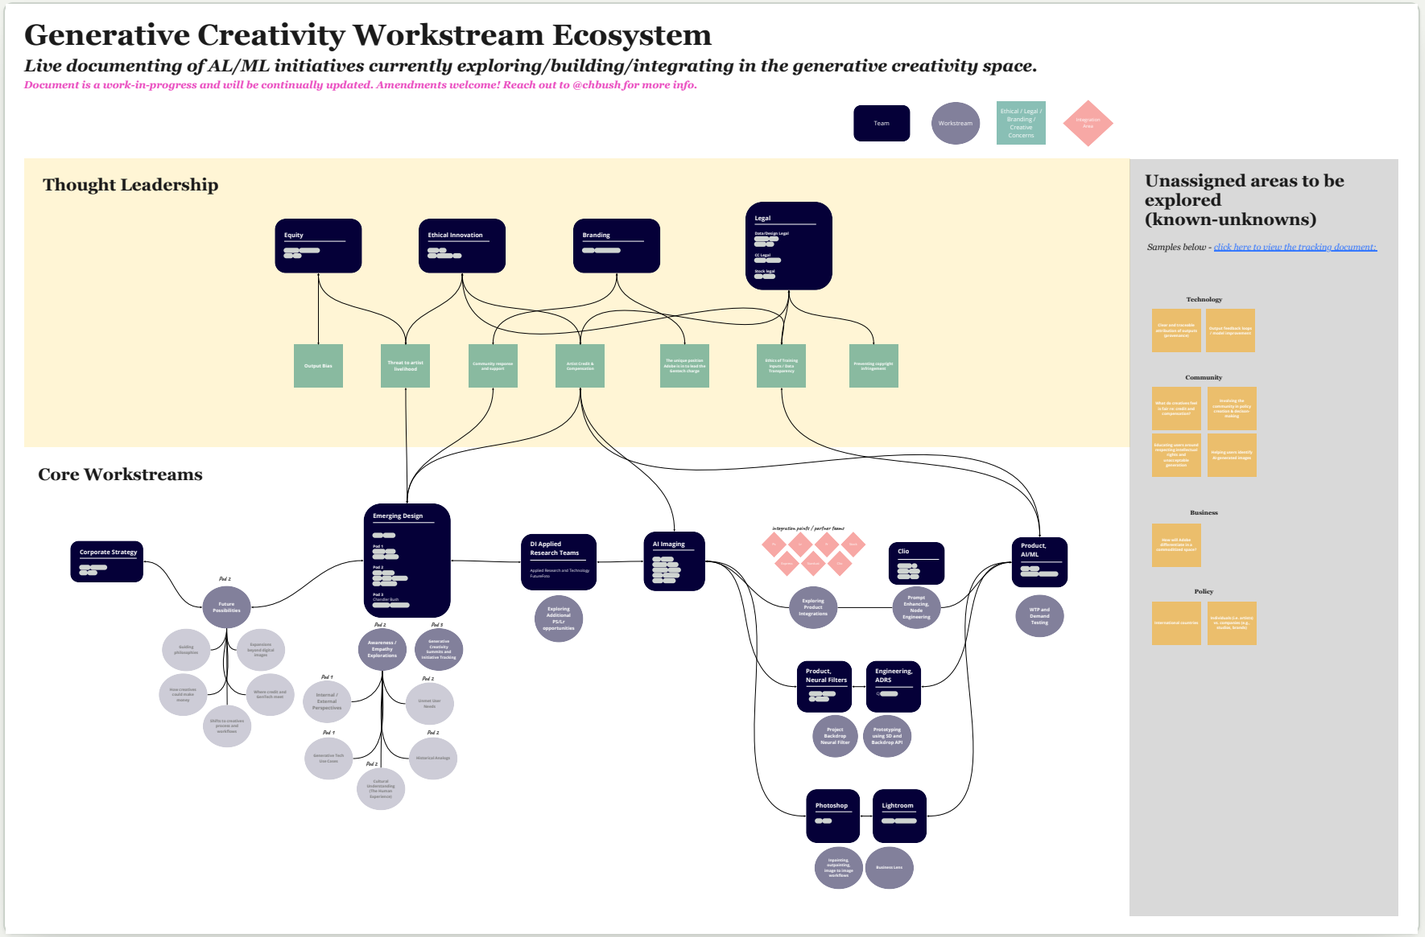

2022

METHODS

Executive interviews, thematic synthesis, ecosystem mapping, strategic framing

OUTPUT

Leadership summit deck, Generative Creativity workstream ecosystem, the decisions list leadership worked from

16 The Generative Creativity workstream ecosystem: thought-leadership workstreams above, core product and research workstreams and their pods below, unassigned areas at right. Colleagues' names are masked.

The problem

Twenty-one VPs and directors each had their own version of what generative AI should mean for Adobe, and teams were duplicating work without knowing it. The pieces no single team would own weren't getting funded.

What I did

My design-strategy partner and I interviewed each of them with the same three questions, then opened the summit with what they'd told us: what could get in the way, the needs no single team would fund, and the decisions leadership had to make first. I also built and kept up the workstream ecosystem, the one place every AI/ML initiative could see what the others were doing.

What came out

Leadership worked from the decisions list, and the 24 working teams got behind one vision and folded it into their own roadmaps. Firefly was built on that.

FROM THE LEADERSHIP SUMMIT DECK

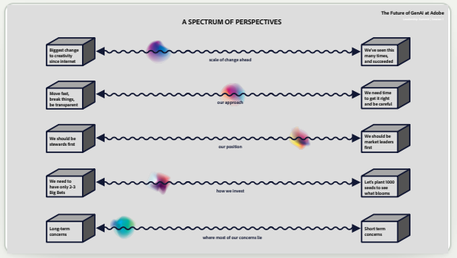

17 Cover

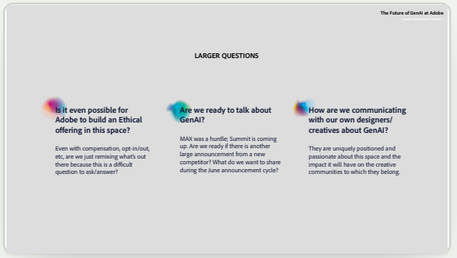

18 Five things that could get in the way

19 Category-agnostic needs no single team would fund

23 The innovator's dilemma and longer-term culture

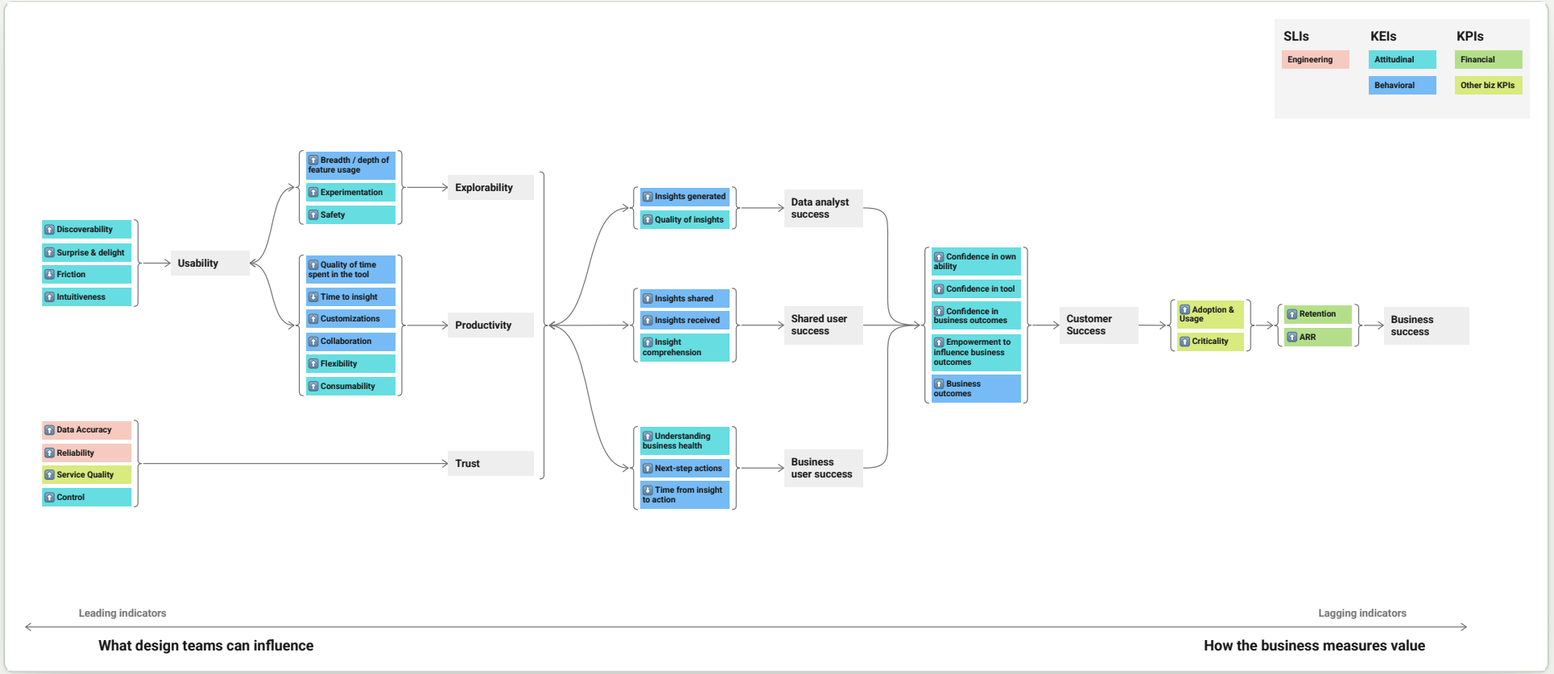

05 ARTICULATING THE BRIDGE BETWEEN DESIGN EFFORTS AND BUSINESS VALUE

Design success metrics map

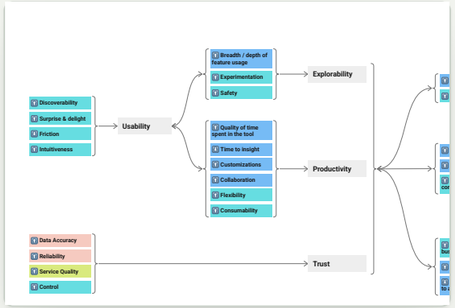

ADOBE ANALYTICS AND CUSTOMER JOURNEY ANALYTICS (CJA) · 2022

> Defined the framework and built the map

The Data and Insights design team needed a way to tie its work to outcomes it couldn't move directly. The map runs left to right, from the leading indicators design can influence through analyst and business-user success to adoption, retention, and ARR; the team adopted it as a 32-metric framework and used it to show where Adobe Analytics was losing ground to newer SMB tools, and which of those losses design could do something about.

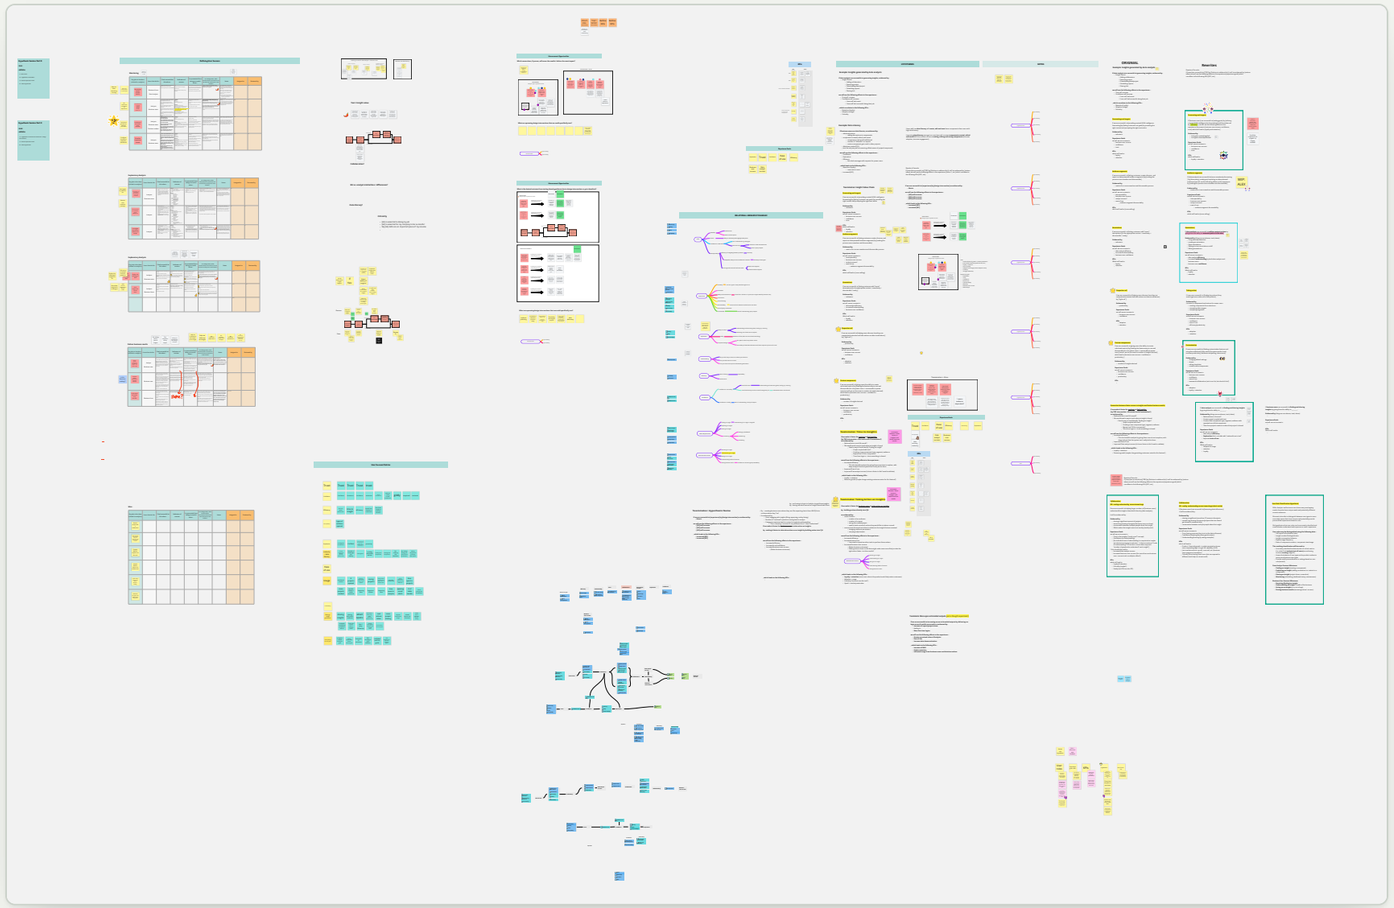

25 Leading indicators, the ones design can influence, on the left. Lagging indicators, where the business measures value, on the right.

26 Detail: the experience indicators under usability, explorability, productivity, and trust.

The board the map came out of

The working board that led up to the map: homework tables from the team, the user success metrics wall, the relational hierarchy diagram, and the synthesis frames. Vector export from Miro; zoom in to read the stickies.

27 The working board in Miro, before the map was drawn

06 —— PROJECT EXAMPLE 6 · ADOBE EXPRESS · 2023

Adobe Express beta research program

Express was shipping betas every month and there was no shared way to say whether a workflow was ready. I built the program that graded each one, and the roadmap and deck that got leadership to back it. Release cycles went from four weeks to three.

ORGANIZATION

Adobe Express, Design Research and Strategy with Design Ops

MY ROLE

Owned the UX Standard of Quality roadmap; designed the grading framework and ran it across the beta program; co-authored the leadership deck with the research manager

WHEN

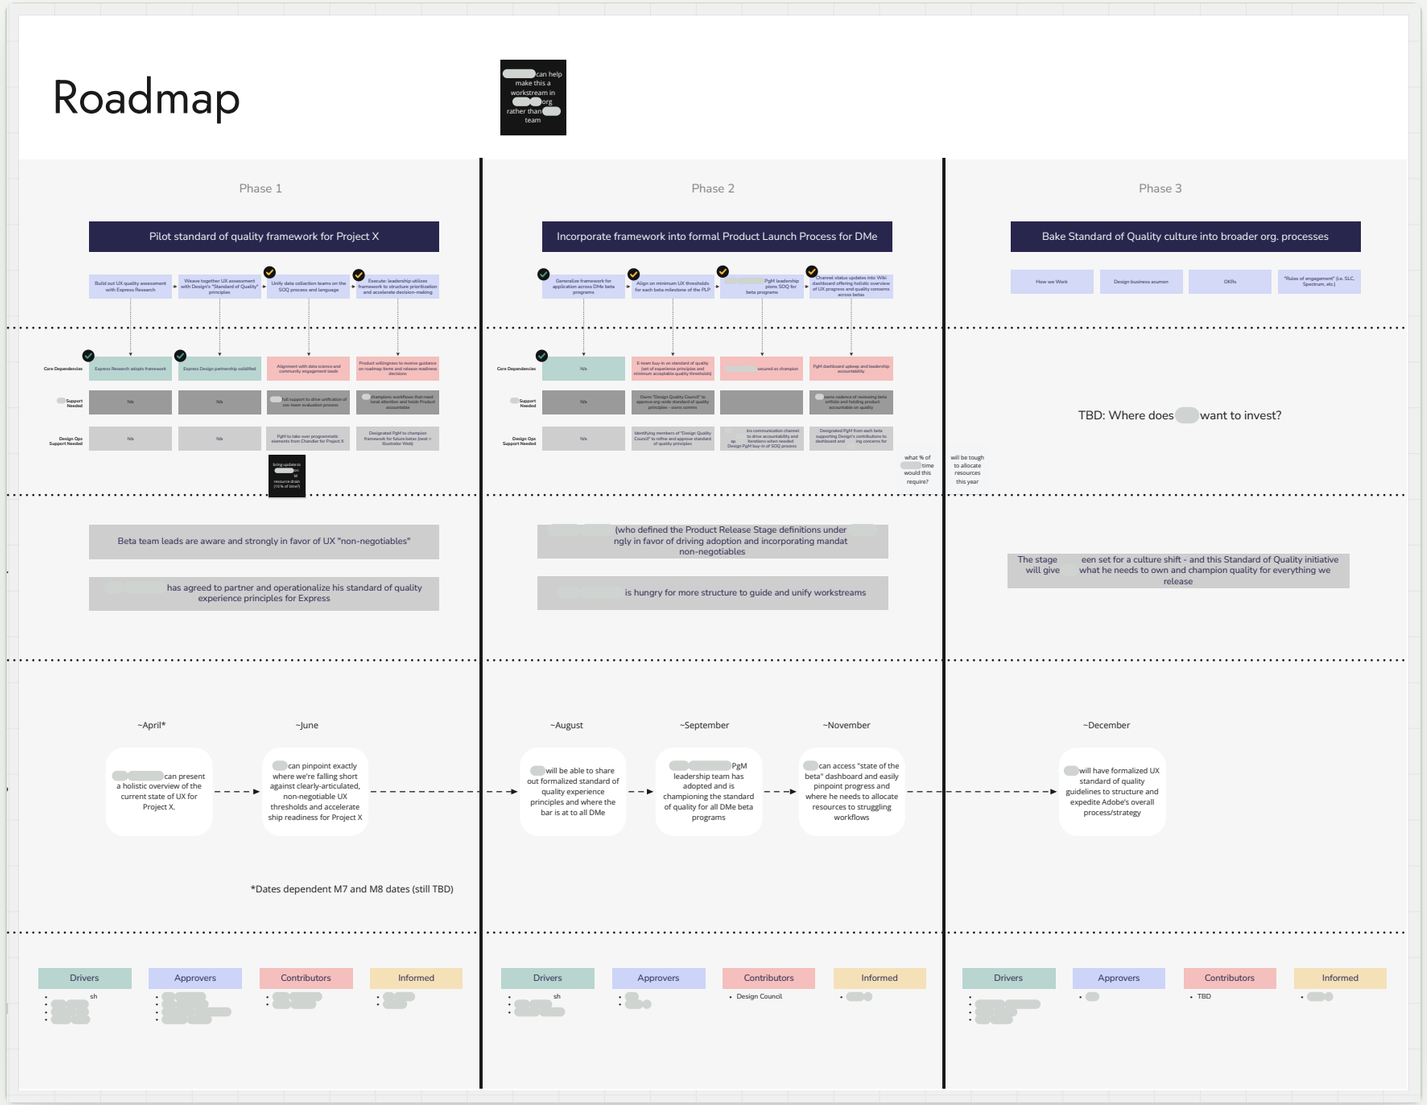

2023

METHODS

Roadmapping and DACI, workflow definition, UX benchmarking, qualitative studies, data-science funnels, design review checklists

OUTPUT

UX Standard of Quality roadmap, workflow grading framework (Miro), the X Workflow Assessment deck, ship-readiness guidelines

28 The UX Standard of Quality roadmap. Three phases, each with dependencies, support needed, readiness, monthly outcomes for the sponsor, and a DACI. Colleagues' names are masked.

The problem

Every team had its own way of saying whether a workflow was good enough to ship, a qual study or a funnel or a design crit, and nothing put those side by side. A ship decision usually turned into an argument.

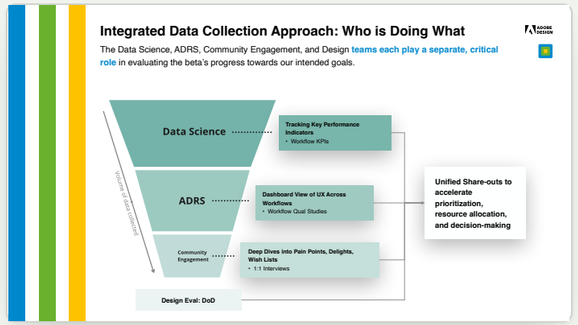

What I did

I wrote the roadmap that made UX quality a condition of shipping, then built one framework that every input feeds into, so each key workflow gets a grade you can trace back to whichever input moved it. The deck took both to leadership.

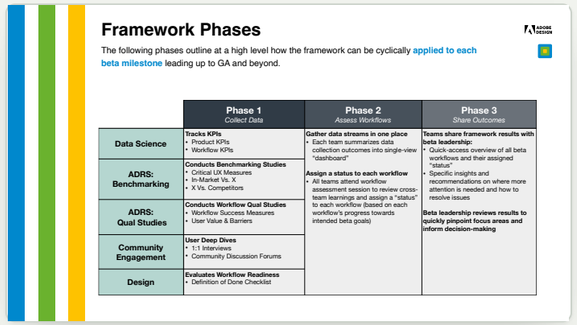

What came out

Leadership backed it. The framework became the ship-readiness guidelines for the Express beta program, and the release cycle dropped from four weeks to three.

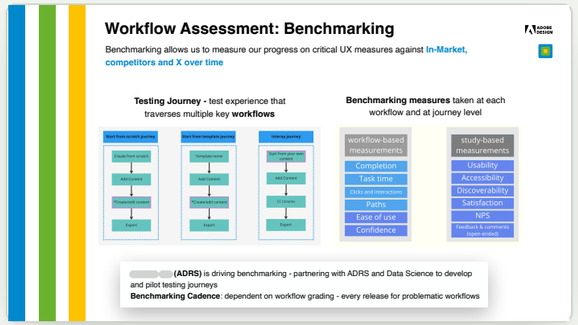

FROM THE X WORKFLOW ASSESSMENT DECK

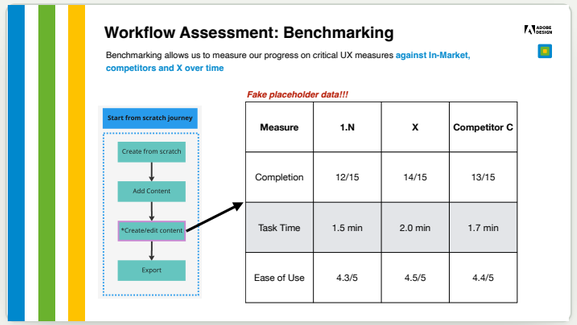

29 Who collects what: Data Science, research, community, and design, feeding one share-out

30 The three phases each beta milestone runs through

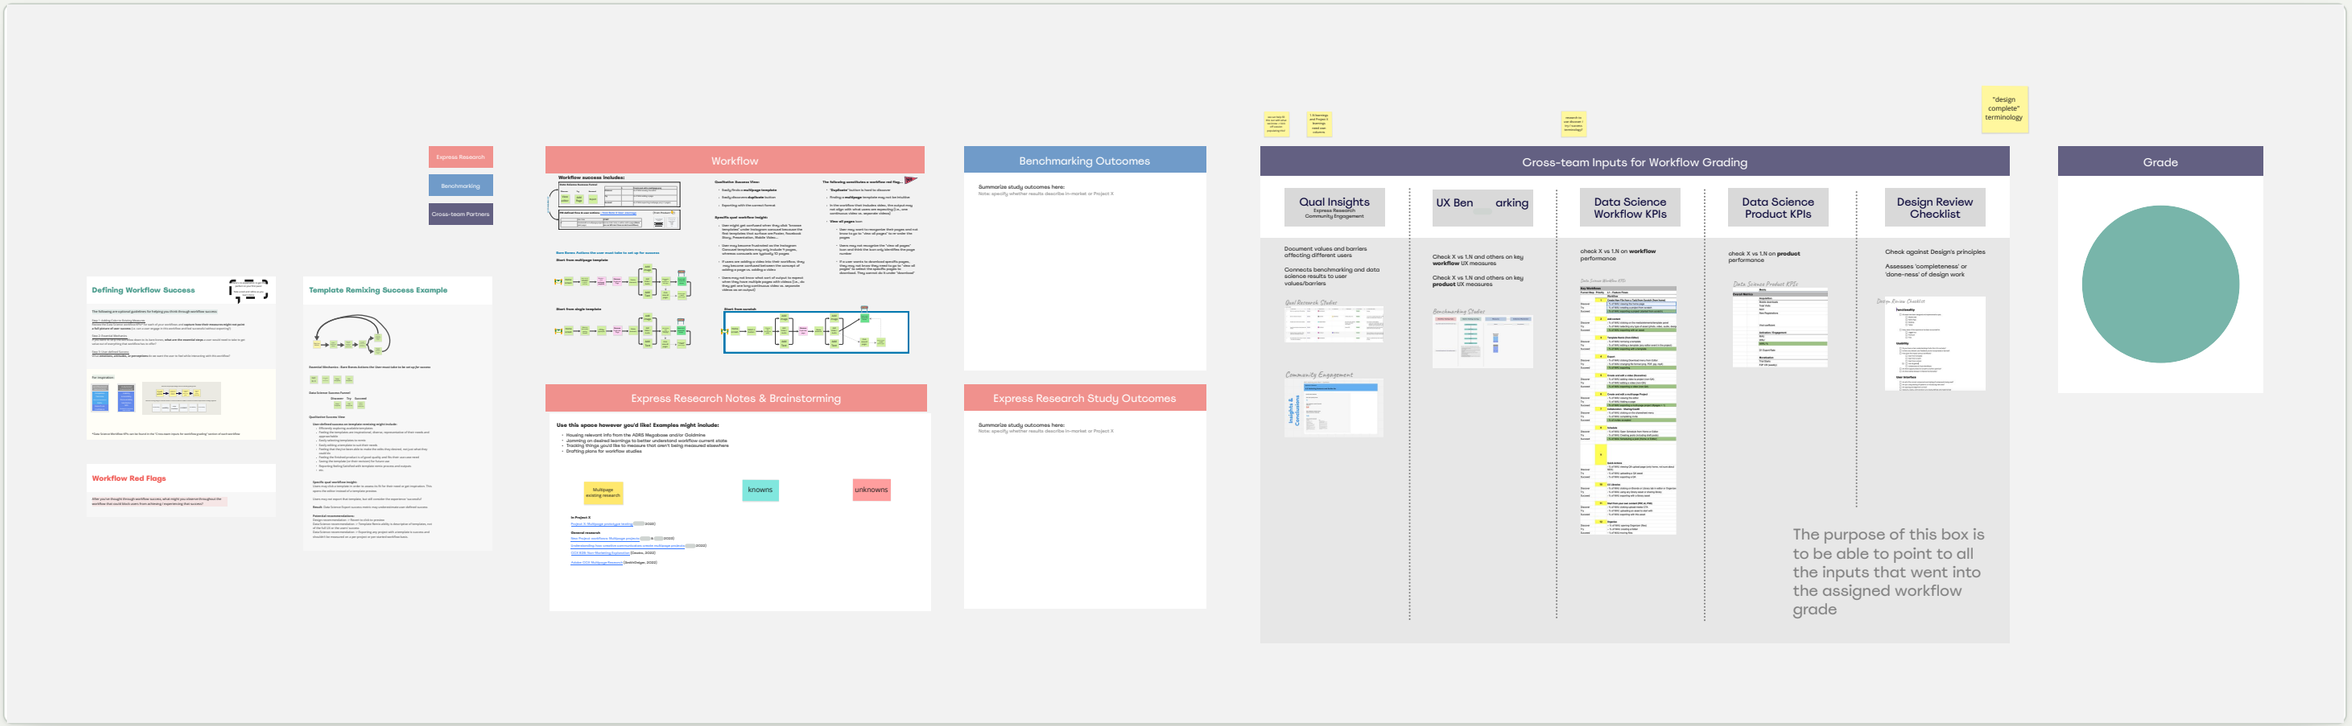

31 Benchmarking: testing journeys across key workflows, and what gets measured

32 How a benchmark reads against in-market and a competitor (placeholder data)

The grading board, one of twelve

One workflow's grading board, left to right: defining success, the workflow and its research notes, benchmarking and study outcomes, the five cross-team inputs, grade. Twelve workflows were graded this way for the milestone; this is one of them.

07 —— OTHER DECKS AND BOARDS

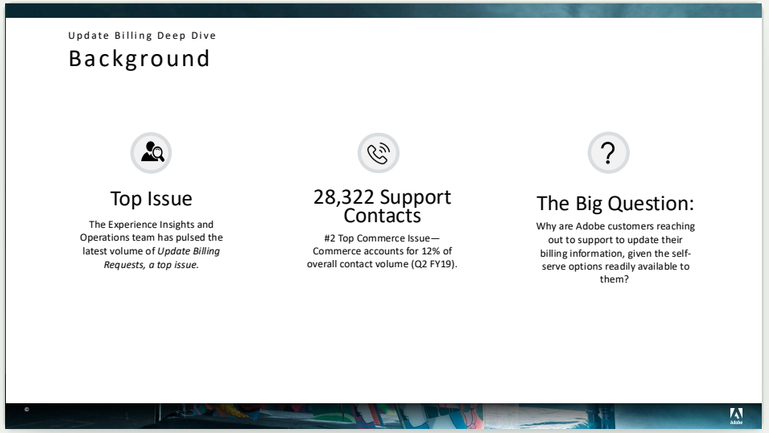

Update Billing Requests: a deep dive

ADOBE · DIGITAL MEDIA CX AND PRODUCT INSIGHTS · MBA INTERNSHIP, 2019

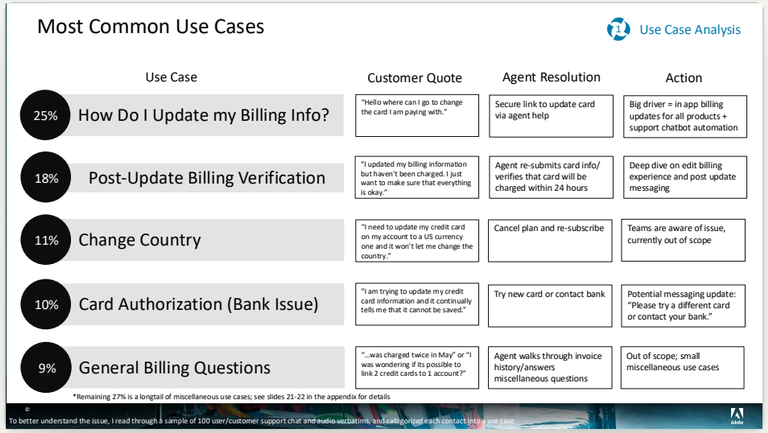

> Owned the whole analysis: use-case coding, cognitive walkthrough, external research, and recommendations

In one quarter, 28,322 people contacted support to update their billing information, with the self-serve option right there. I coded 100 transcripts into use cases and walked the flows myself, found the form accepting invalid card details and then showing a success message, and the fixes cut those requests by 31%.

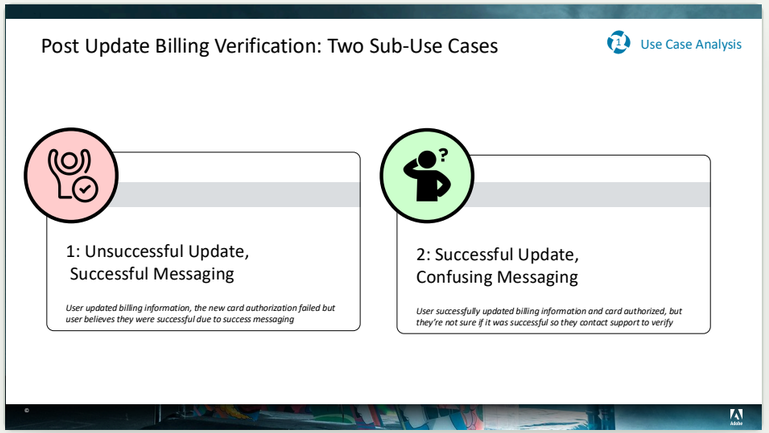

4 of the 6 selected slides; all of them are on the web version.

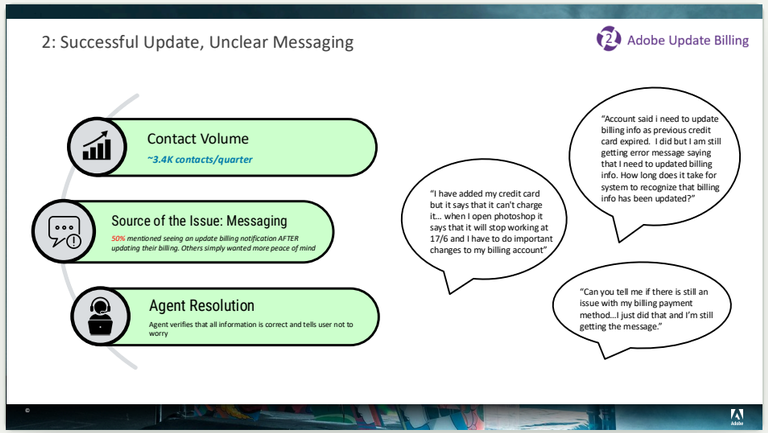

34 The question: 28,322 contacts

35 The most common use cases, from 100 coded transcripts

36 Two sub-use cases worth fixing

37 Successful update, unclear messaging

07 —— OTHER DECKS AND BOARDS

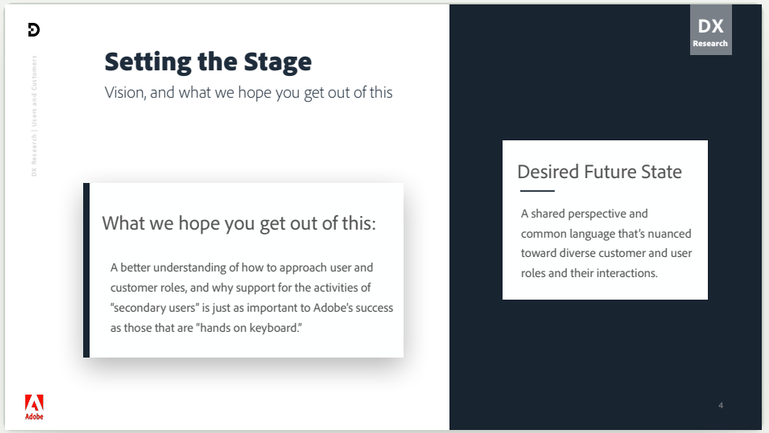

DX Users and Customers

ADOBE EXPERIENCE CLOUD · DESIGN RESEARCH AND STRATEGY · MAY 2021

> Co-authored with three experience researchers; owned the role framework and the journey framing

A guide to thinking about Experience Cloud's audiences as whole organizations rather than the one person with their hands on the keyboard. It separates customers (the company that buys) from users (the people in the product), defines four roles on each side, and calls out the facilitators no team had been treating as its main audience.

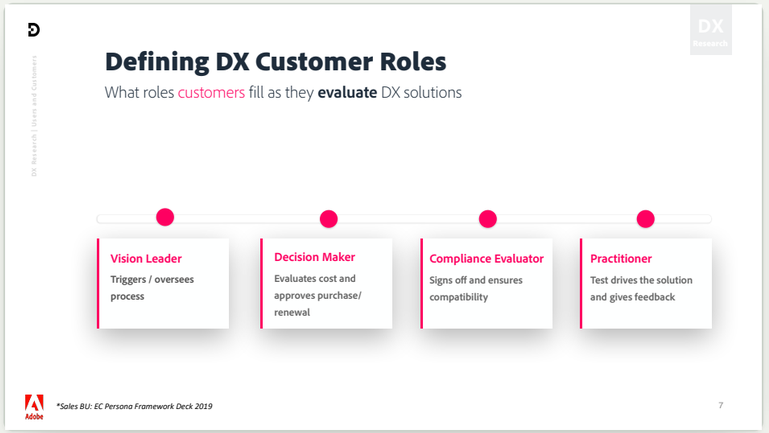

4 of the 6 selected slides; all of them are on the web version.

07 —— OTHER DECKS AND BOARDS

Design POV: a competitive analysis workshop

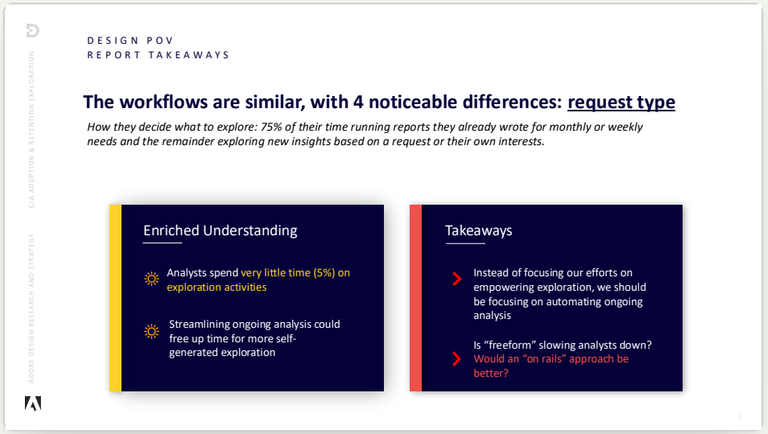

ADOBE ANALYTICS AND CUSTOMER JOURNEY ANALYTICS (CJA) · DESIGN RESEARCH AND STRATEGY · JULY 2022

> Ran the workshop; wrote and designed the deck

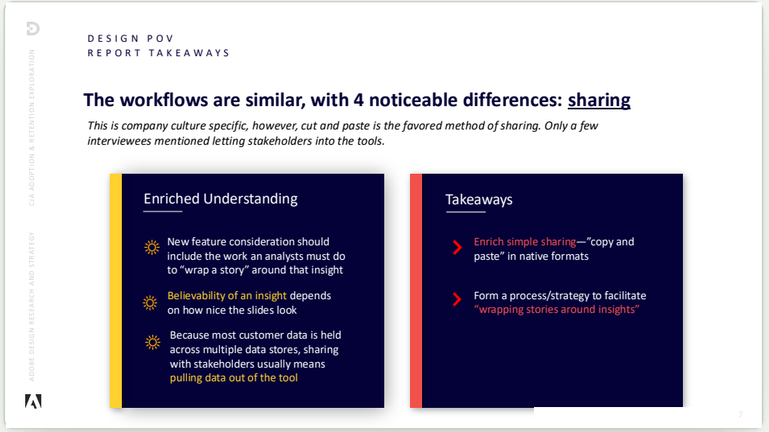

The Data and Insights design team had a competitive research report on how analysts use Amplitude and Mixpanel, and no shared view of what it meant for Adobe Analytics against the rising SMB analytics platforms. I ran a workshop that turned it into a design point of view, one page per finding with what it changed about our understanding and what we'd do about it, in a format the team kept using.

42 Cover

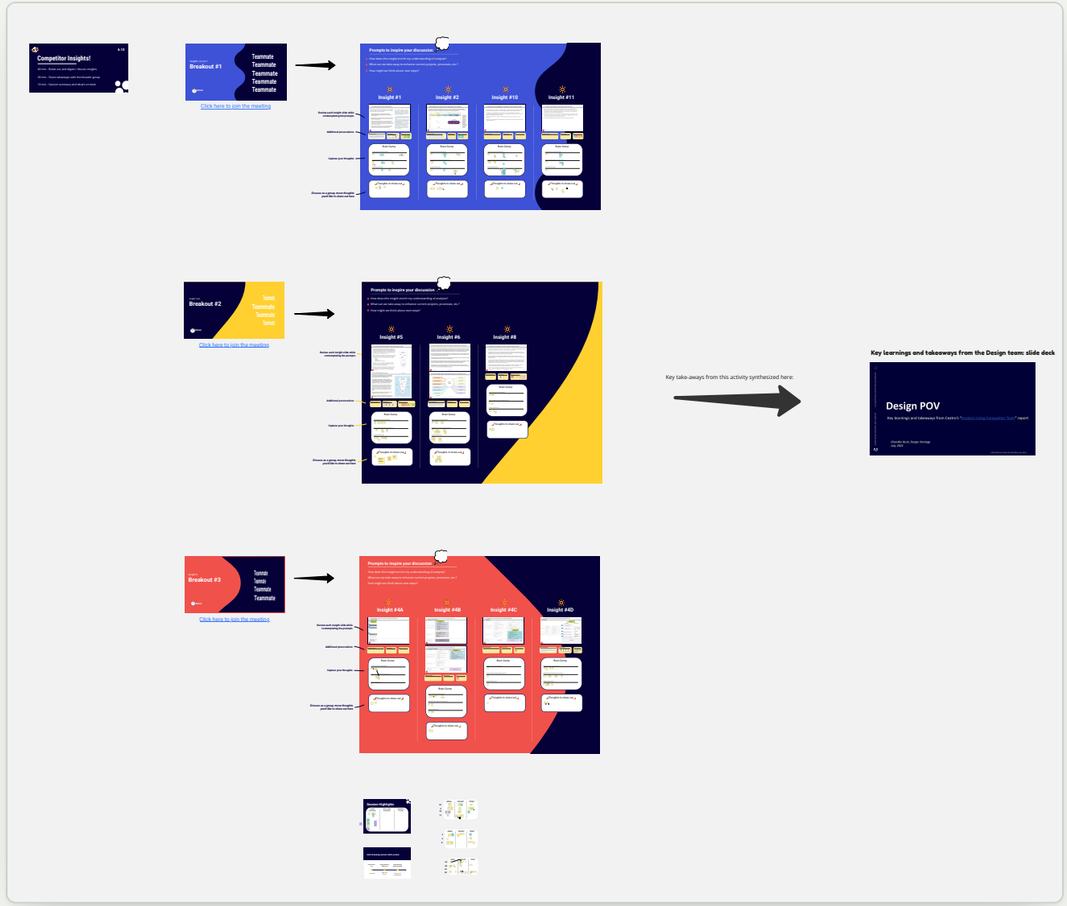

43 Four workflow differences: request type

44 Four workflow differences: sharing

The workshop board

The workshop board. Three breakout rooms, each working a set of insights through the same prompts, and the Design POV deck they fed into. Vector export from Miro; participants' names are masked.

45 The competitor insights workshop in Miro

About me

I'm a design strategist and mixed-methods researcher. Right now I'm a senior human-centered design consultant at Cast & Hue, a healthcare-focused strategy firm in Salt Lake City, where I run client engagements from kickoff to final deliverable, and where I rebuilt our research practice around AI. Before that I spent three years on Adobe's internal consulting team, the group that gets handed the problems nobody else has the time or the budget for. I worked daily with the SVP of AI/ML on what became Firefly, defined the success metrics for the Analytics design team, built the Express beta program, and took on the lead PM role when the fastest way to get something shipped was to do it myself. MBA in strategy and an MS in information systems from the University of Utah.

Evidence first

Every card on one of my maps traces back to a person and a timestamp, and I don't call something a theme until several people have said it independently.

Where the speed comes from

Same-day structured analysis, AI agents that help code the interviews and check the work, and maps generated straight from the data. That's where the speed comes from, so I don't have to get it by doing fewer interviews.

Strategy that gets funded

Opportunity maps that come with a business case, ranked on desirability, feasibility, and viability, and handed to product teams in a shape they can start building from.

I'm looking for design strategy, UX research, and product roles where the problem is still fuzzy. If you've got one of those, I'd like to hear about it.
